

Computing Infrastructure
June 15, 2022

Course Section:	<input type="checkbox"/> Prof. Ardagna	<input type="checkbox"/> Prof. Palermo	<input type="checkbox"/> Prof. Roveri
Student id (codice persona):		
Last Name: (LAST NAME IN CAPITAL LETTERS)		
First Name: (FIRST NAME IN CAPITAL LETTERS)		

Exam Duration: 1hour and 15min

Students are not permitted to use mobile phones and similar connected devices. Course materials and programmable devices (e.g. programmable calculators) cannot be used as well. **Any violation of the rules is considered a cheating action.**

Answers must be given on the Answer Sheet. Any box filled or answer provided on the other sheets will be ignored. Students must use a pen (black or blue) to mark the answers (no pencil).

Write the LAST and FIRST name in CAPITAL LETTER, and in this order, on the first and last page of the exam. **Do not write your name on the first page of the Answer Sheet.** It is requested only the personal code.

Check that the first number of the code for the Answer Sheet is the same as for the other sheets. The code can be found in the top-right corner of each page in the form +NN/KK/XX+. The parts that should correspond is ONLY the first digit NN

Do not use crosses to mark the answers, **fill clearly the box you selected** without overlapping on other boxes. If you make a mistake on them, circle the word *Question* together with the related number, and write the correct letter to its side.

Numerical exercises require to write the formulas and procedure used to solve the problem just after the question in the left space. Only the numeric answer and its unit should be reported on the corresponding dotted line in the Answer Sheet.

The answer to Question 17 should be written using ONLY the space available on Page 2 of the Answer Sheet. The answer should be readable by the professor. Unreadable answers will be considered wrong.

Scores: correct answers take positive points, unanswered questions take 0 points, **wrong answers can have negative points.** An indication of the points is available at the beginning of each section. The final score can be re-modulated at the end of the evaluation.

Multiple choice questions

Correct answer: +2, No answer: 0, Wrong Answer -0.5

Answers must be given on the ANSWER SHEET. Any box filled here will be ignored.

Question 1

What is a Graphical Processing Unit (GPU)?

- ☐ A A specialized hardware meant to provide storage in a data center
- ☒ B A specialized hardware meant to support data-parallel computation
- ☐ C An Internet-of-Things device meant to operate in the field
- ☐ D A specialized hardware meant to provide networking in a data center

Question 2

In the Microkernel architecture of VMs:

- ☐ A Drivers are part of the Hypervisor
- ☐ B Drivers are part of the Guest VMs
- ☐ C Drivers are part of a specific service VM
- ☐ D Drivers are part of the Guest OS

Question 3

A System VM:

- ☐ A Provides the interface to system calls and user ABI
- ☐ B Provides the interface to system ABI and the user ISA
- ☐ C Provides the interface to system ISA and user ISA
- ☐ D Provides the interface to system ABI and the user ABI

Question 4

A System Virtual Machine can provide its functionality:

- ☐ A Only on the hardware
- ☐ B Either working directly on the hardware or running on an Operating System
- ☐ C Only on top of an Operating System
- ☐ D None of the others

True false questions

Correct answer: +1, No answer: 0, Wrong Answer -0.5

Answers must be given on the ANSWER SHEET. Any box filled here will be ignored. Pay attention to the position (A or B) of the True/False answers, since they are not always in the same position.

Question 5

Rack servers need additional cooling systems due to their high overall component density

☐ A True

☐ B False

Question 6

In datacenter network, TOR refers to top-of-rack switches:

☐ A True

☐ B False

Question 7

Is the Java Runtime Environment an example of system virtual machine?:

☐ A False

☐ B True

Question 8

Data centers are buildings where multiple servers and communication units are co-located

☐ A False

☒ B True

Question 9

Paravirtualization cannot be used with unmodified OS

☐ A True

☐ B False

Exercises

Correct answer: +2, No answer: 0.

The formulas and procedures used to solve the exercises should be included here close to the question. The numeric answer, and only that, must be given on the ANSWER SHEET. Any number written only here will be ignored. The correct number is ONLY a necessary condition for a correct answer. If the formulas are not available after each exercise, they will be considered as not answered.

Question 10

Consider a server composed of 2 CPUs and a variable number of GPUs. The $MTTF_{CPU} = 350days$ and $MTTF_{GPU} = 250days$. Given that the server to work requires that at least 1 CPU and 1 GPU are properly working, what is the minimum number of GPUs that is needed to achieve a reliability value at $t = 70days$ greater than 0.95? Use at least 4 decimal digits for all the intermediate calculations.

Question 11

A temperature monitoring system within each rack of a Data Center is composed of two redundant sensors, a microcontroller board, and a network device. All components are repairable. We know that each component has an MTTR of 3 days, the MTTF of the sensors is $MTTF_{sen} = 29days$ and the MTTF of the other two components is $MTTF_{micro} = MTTF_{network} = 19days$, what is the system availability? Use at least 4 decimal digits for all the intermediate calculations.

+17/5/16+

Question 12

Consider an HDD with, 4KB as block size, 10000 RPM as rotation speed, 0.2 ms as transfer time of 1 block, 4ms as average seek time, seek time, and a negligible overhead of the controller. What is the minimum locality required to achieve an average transfer time of 1.2 sec for a file of 800KB?

Question 13

Consider a RAID 4 configuration with 10 disks. How many I/O operations are requested to update one block of a data disk (considering the sum over the entire set of disks)?

Question 14

Consider the following RAID 0+1 setup considering 6 disks, each one with an MTTF equal to 600 days and an MTTR equal to 5 days. Consider a single mirror case for the RAID 1 part. What is the MTTF of the storage infrastructure?

+17/6/15+

Question 15

A system is composed of different servers. We have the possibility to fully observe only one of them, i.e. S1. It is characterized by a utilization $U_{S1} = 0.8$, an average service time of $S_{S1} = 200$ ms, and a demand of $D_{S1} = 100$ ms. What is the throughput of the server S1 (X_{S1})?

Question 16

Consider the same system and situation as in the previous question. Knowing that the average system response time (R_{Sys}) is equal to 2s, what is the average number of jobs within the entire system (N_{Sys})?

+17/7/14+

Open Question

Correct answer: +5, No answer: 0. Points are modulated considering the written text

Write the answer using ONLY the space available on Page 2 of the Answer Sheet. The answer should be readable by the professor. Unreadable answers will be considered wrong.

Question 17

⇒ Why are HDDs still widely used in Data Centers even if SSDs provide better performance?

!!!ANY ANSWER PROVIDED IN THIS PAGE WILL BE IGNORED!!!

If needed, you can use the space hereafter to organize your answer.

+17/8/13+

⇒ **This page intentionally left blank** ⇐

If needed, you can use this page for notes. Any answer written here will be ignored.

Computing Infrastructure - Answer Sheet (Page 2)
June 15, 2022

FIRST NAME and LAST NAME in CAPITAL LETTERS

.....

(LAST NAME) (FIRST NAME)

Question 17

⇒ Why are HDDs still widely used in Data Centers even if SSDs provide better performance?

This image shows a full page of white paper with horizontal dotted lines, typical of primary school handwriting practice paper. The lines are evenly spaced and run across the entire width of the page. There are no margins, text, or other markings present.

Question	17
1	B
2	C
3	C
4	B
5	A
6	A
7	A
8	B
9	A
10	3 GPU
11	0,739 o 73,9%
12	0,171 o 17,14%
13	4 I/O operations
14	4000giorni o 10,96 anni
15	4 Job/Sec
16	16 jobs
